

ALIMENTOS Y BEBIDAS AEROSOL

Belt Dressing

DESCRIPCIÓN DEL PRODUCTO:

JAX Belt Dressing es un producto que se utiliza en correas de transmisión, correas de cuero, lona y caucho que ahora es registrado en la NSF como H1 para ser usado como lubricante de contacto incidental para alimentos. No contiene resinas ni asfaltos, y no recogerá polvo, suciedad u otros materiales abrasivos en el aire que puedan cortar la vida útil de una correa de transmisión. La formulación exclusiva mantendrá las cintas de transmisión limpias y flexibles, sin acumulaciones.

BENEFICIOS DEL PRODUCTO:

JAX Belt Dressing alarga la vida útil de las correas de transmisión al evitar el agrietamiento prematuro y la fragilidad. Cuando se usa en correas deslizantes, JAX Belt Dressing ayudará a restablecer la potencia de salida optima a la vez que proporcionara una tracción mejorada que permitirá tener una tensión de correa correcta.

APLICACIONES:

JAX Belt Dressing esta formulado para funcionar igualmente bien en:

- Correas planas de caucho (goma) o correas trapezoidales.
- Accionamiento de correas industriales
- Correas de ventilador de camiones y automóviles.
- Correas de cuero de maquinaria agrícola o de despegue de lona
- Correas para compresores de alta carga o generadores industriales

DATOS TÉCNICOS:

Propulsor:	Propano y n-butano
Punto de inflamación:	-6 °F (-21 °C) Producto a granel, etiqueta típica.
Spray Patrón:	Fluye típico
Textura:	Película ligeramente adhesiva
Apariencia:	Líquido claro
Consistencia:	Ligero
Gravedad específica:	0,70 para Concentrado, típico

NSF Registration No. / Category Code: 143436 / H1

PACKAGING:

Latas de aerosol peso neto 10.5 onzas (12 / caja) – Parte JAX107

RE: JAX BELT DRESSING (Aerosol)
Category Code: H1
NSF Registration No. 143436

Dear Ms. Patty Riek:

NSF has processed the application for Registration of JAX BELT DRESSING (Aerosol) to the NSF International Registration Guidelines for Proprietary Substances and Nonfood Compounds (2009), which are available at www.nsfwhitebook.org. The NSF Nonfood Compounds Registration Program is a continuation of the USDA product approval and listing program, which is based on meeting regulatory requirements including FDA 21 CFR for appropriate use, ingredient and labeling review.

This product is acceptable as a lubricant with incidental food contact (H1) for use in and around food processing areas. Such compounds may be used on food processing equipment as a protective anti-rust film, as a release agent on gaskets or seals of tank closures, and as a lubricant for machine parts and equipment in locations in which there is a potential exposure of the lubricated part to food. The amount used should be the minimum required to accomplish the desired technical effect on the equipment. If used as an anti-rust film, the compound must be removed from the equipment surface by washing or wiping, as required to leave the surface effectively free of any substance which could be transferred to food being processed.

NSF Registration of this product is current when the NSF Registration Number, Category Code, and Registration Mark appear on the NSF-approved product label, and the Registered product name is included in the current NSF White Book Listing of Nonfood Compounds at the NSF website (www.nsfwhitebook.org). The NSF Registration Mark can be downloaded by clicking the "Download Registration Mark" link on the NSF website (www.nsfwhitebook.org).

NSF Listing of all Registered Nonfood compounds by NSF International is not an endorsement of those compounds, or of any performance or efficacy claims made by the manufacturer.

Registration status may be verified at any time via the NSF website, at www.nsfwhitebook.org. Changes in formulation or label, without the prior written consent of NSF, will void Registration, and will supersede the on-line listing.

Sincerely,

Clifton McKellan
NSF Nonfood Compounds Registration Program
